WPI; 2000-062002/05. P-PSDB; AAY32375.

A new regulatory element binding factor used to treat an adverse cardiovascular condition.

Claim 1; Page 77-79; 57pp; English.

This is the nucleotide sequence of cDNA clone KND42 encoding mouse negative regulatory element binding transcription factor CNREB-2. KND42 was obtained using yeast one-hybrid cloning and mouse kidney cDNA library screening. CNREB-2 binds to the 5' flanking region of the renin gene and

```
modulates expression of the gene. 2 Other isoforms (see AAY32376-77) of CNREB-2 have been identified, the shortest isoform showing strongest binding activity to the CNRE of the renin promoter. CNREB-2 shares no significant homology to any other known gene or protein. It is a novel zinc finger transcription factor. Expression vectors, isolated mucleic acid molecules and CNREB-2 polypeptides are claimed, The invention also relates to CNREB-1 polymucleotides (see AAZ35040-43), polypeptides (see AAY32374) and inhibitors, and their use in claimed methods for decreasing expression, and for determining the level of CNREB-1 expression, and for determining the level of CNREB-1 expression, an increase in expression being indicative of an increase gusceptibility to development of a renin-angiotensin system mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorder

                                                                                                                                                                                                                                                                                                                                                                        This is the nucleotide sequence of a cDNA clone encoding mouse negative regulatory element binding transcription factor 2 (CNREB-2) long isoform (CNREB-2L. The clone was obtained using yeast one-hybrid cloning and mouse kidney cDNA library screening. CNREB-2 binds to the 5. flanking region of the remin game and modulates expression of the gene. 2 Other isoforms (see AAY32375 and AAX32376) of CNREB-2 have been identified, the short isoform showing strongest binding activity to the CNRE of the remin promoter. CNREB-2 shares no significant homology to any other known gene or protein. It is a novel zinc finger transcription factor. Expression of vectors, isolated nucleic acid molecules and CNREB-1 polypeptides are claimed. The invention also relates to CNREB-1 polypeptides (see AAX33540-43), polypeptides (see AAX32374) and inhibitors, and their use in claimed methods for decreasing or increasing remin expression cetermining the level of CNREB-1 expression, an increase in expression being indicative of an increase discentificative of an increase discentificative of an increase discentificative of a remin earlier discrete.
                                                                                                                                                                                                                                                                                                            A new regulatory element binding factor used to treat an adverse cardiovascular condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2651 BP; 548 A; 744 C; 851 G; 508 T; 0 U; 0 Other;

This is the nucleotide sequence of a cDNA clone encoding mouse negative regulatory element binding transcription factor 2 (CNREB-2) short isoform CNREB-25. The clone was obtained using yeast one-hybrid cloning and mouse kinney CNNA library screening. CNREB-2 binds to the 5' flanking region of the remin gene and modulates expression of the gene. 2 Other isoforms (see AAY32375 and AAX32377) of CNREB-2 have been identified, the short of isoform showing strongest binding activity to the CNRE of the remin promoter. CNREB-2 shares no significant homology to any other known gene or protein. It is a novel zinc finger transcription factor. Expression or protein. It is a novel zinc finger transcription factor. Expression or protein. It is a novel zinc finger transcription factor. Expression claimed. The invention also relates to CNREB-1 polymorlectides (see AAX35040-43), polypeptides (see AAY32374) and inhibitors, and their use in claimed methods for decreasing or increasing remin expression, and for determining the level of CNREB-1 expression, an increase in expression and in any and increase in expression.
                                                                                                                                                                                                                                                                                                                    2640

The present sequence is that of a contig containing most of the murine Czf-1 coding sequence, lacking only the 5' portion which codes for the Neterinius of Czf-1 protein. The contig was obtained by screening mouse expressed sequence tag sequences using rat Czf-1 protein as a sequence probe. Czf-1 protein as a sequence probe. Czf-1 is expressed in a variety of tissue types, particularly of steoblasts and chondrocytes. It is expressed in the nuclei of hypertrophic chondrocytes of the growth plate, and exhibits an alternate expression and intracellular localisation pattern in cells expressing high, i.e. constitutively active, levels of fibroblast growth factor receptor (FGGR). It is up-regulaced in osteoarthritic cartilage tissue and serves as a marker for osteoarthritis. Czf-1 has been found in rats, mice and humans. Sequence identity for nuclectide and amino acid sequences is above 85%. Czf-1 polynuclectides, polypeptides and serves as the characterisation, diagnosis and treatment of FGRR-related and skeletal diseases and disorders, such as osteoarthritis, rheumatoid arthritis, and cartilage related diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TGCCAGACTTGAGTCTTCATGTGCCACCAGGTGGTGCCAGTTTCCTGCCAGACTGTGGGC

The present sequence is that of cDNA was isolated from a glioma CDNA protein, designated Czf-1. The cDNA was isolated from a glioma cDNA library using a probe from the 3' end of the Czf-1 gene. Czf-1 is expressed in a variety of tissue types, particularly osteoblasts and chondrocytes. It is expressed in the nuclei of hypertrophic chondrocytes of the growth plate, and exhibits an alternate expression and intracellular localisation pattern in cells expression and constitutively active, levels of fibroblast growth factor receptor (FGFR). It is up-regulated in osteoarthritic cartilage tissue and serves as a marker for osteoarthritis. Czf-1 has been found in rats, mice and humans. Sequence identity for nucleotide and anino acid sequences is above 85%. Czf-1 polymucleotides, polypeptides and antibodies can be used in the characterisation, diagnosis and treatment of FGFR-related and skeletal diseases and disorders, such as osteoarthritis, rheumatoid arthritis, and cartilage related diseases

The present sequence is that of CDNA encoding a novel human zinc finger protein, designated Czf-1. Czf-1 is expressed in a variety of tissue nuclei, designated Czf-1. Czf-1 is expressed in a variety of tissue nuclei by particularly offerbolasts and chondrocytes. It is expressed in the nuclei of hypertrophic chondrocytes of the growth plate, and exhibits an alternate expression and intracellular localisation pattern in cells factor receptor (FGFR). It is up-regulated in osteoarthritic cartilage tissue and serves as a marker for osteoarthritis. Czf-1 has been found in rats, mice and humans. Sequence identity for nucleotide and amino acid sequences is above 85%. The human gene maps to chromosome 2p22-23. Czf-1 polynucleotides, polypeptides and antibodies can be used in the disarcters acid in disponsels and treatment of FGFR-related and skeletal diseases and disorders, such as osteoarthritis, rheumatoid arthritis, and cartilage related diseases CCTGTATTCACCTCCACTGCCCCCAGGGGCTGTGGACAAACCGGCTGGGGGACTGCCCA 1908 1909 GCCTCCCACCTGTTATTTAACTTATTTTCAGTGCTTTATAATAAAGGAAACACTAACAAA 1968 GCCTTTTAC----TGTTTTAACTTATTTCAGTGCTTTATAATAAAGGAAACACTAAACAGA Czf-1 Human, Czf-1, chondrocyte; zinc finger; osteopathic; antiarthritic; antirheumatic; chromosome 2p22-23; gene; ss. New chondrocyte-derived zinc finger polypeptides and encoding polymucleotides, useful for detecting, diagnosing and treating (protein-related diseases, such as osteoarthritis and rheumatoid arthritis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2423 CAGCCCAGTTCGTCAACCTGACGCGACATACCCGCACCCATACTGGCGAGAAGCCCTACC 2482
                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the coding sequence for a human secreted protein. The sequence was isolated from an adult lung cDNA library. The proteins and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have tases as nutritional supplements, as cytokine or cell proliferation autoimmune diseases, as haematopoiesis regulators (treating mysloid or autoimmune diseases, as haematopoiesis regulators (treating mysloid or hymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  438
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       498

encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous to localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhian activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemids and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 40206; 3071pp + Sequence Listing; English

AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I) amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) proteins and polymucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I)

                                                                                                                                                                                                                                                                                                                                  1680
polynucleotides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, diagnose and treat immune/haematopoietic-related diseases, especially cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87649 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM8169 represent sequences used in the exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides the protein and coding sequences of a number of human reproductive system related antiqens. These can be use in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2003 AAGAGGAAGAAGAAGGATGAAGGTGACGGCCACAACGACCAGCTCATGAGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides the protein and coding sequences of 973 minan testicular antigens, and fragments of their genomic sequences. The sequences can be used in the treatment of cardiovascular, urinary system, reproductive system, immune, respiratory, neurological and gastrointestinal disorders, infections, and particularly cancer, especially testicular cancers. The present sequence is a DNA encoding a protein fragment of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding 973 human testicular antigen polypeptides, useful for preventing, diagnosing and/or treating testicular cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1501 CTATTTCACCAGGAGACTCTCTGGGGGCCAGGCCTGGGCTTCCCTATGGGCTGAGCGACG

ΩS (HUMA-) HUMAN GENOME SCI INC. Rosen CA, Barash SC,

WPI; 2001-541565/60

7227

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant) agonists are useful in the mucleic acids, proteins, antibodies and (ant) agonists are useful in the mucleic acids, proteins, antibodies and (ant) agonists are useful in the mucleic acids, proteins, antibodies and (ant) agonists are useful in breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune to search actions antibodies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders eugh arthritis and ulcerative colitis; (c) cardiovascular disorders eugh as wiral, bacterial, fungal and parsaitic infections Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly the multiple to multiple sclerosis, tral, bacterial is electronic format directly the multiple to multiple sclerosis intentions who was obtained in electronic format directly the multiple to multiple sclerosis and parsaitic. Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases. Disclosure; SEQ ID NO 8208; 1701pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to novel human secretory or membrane proteins (ADAS4072-ADAS5710) and their coding sequences (ADAS4071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 44;

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polymucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous not localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic coullisation of the activities such as: Immune system suppression, Activin/inhibin activity, chaemcatic/chemokinetic activity, haemostatic and thrombolytic activity, cancer disanosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form

* NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. Gaps between the contigs are represented as current of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

* Tas contig of 1201 bp in length

* 2030 2122; gap of 100 bp

* 2030 2122; gap of 100 bp

* 3904 6031: contig of 1248 bp in length

* 6052 6181; gap of 100 bp

* 6052 contig of 2148 bp in length

* 6152 10082: contig of 2148 bp in length

* 6152 10082: contig of 3331 bp in length

* 10183 18316: contig of 8134 bp in length

AL Submitted (13-NOV-2002) Human Genome Sequencing Center, Department Of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 13, 2002 this sequence version replaced gi:22856068.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the fature table balow represents a scaffold, in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filed with Ns to the serimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
               * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)

* NOTE: This sequence may represent more than one clone.

* NOTE: This is a "working draft" sequence. It currently

* consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is
